
ScanRobot® manufacturing insight

Have a look at the TREVENTUS manufacturing plant

In the picture beneath you can take an insight view on the ScanRobot® 2.0 MDS production chain.

Each ScanRobot® goes through a systematic production procedure with clearly specified routines due to our established Quality Standards. Thereby every ScanRobot® has to pass different tests several times to ensure the highest quality level.

After these tests are accepted by a TREVENTUS specialist the ScanRobot® and all its accessories will be safely packed into a solid wooden crate to get ready for the shipment in over 50 countries worldwide.
